Laboratory work #2

1 Purpose of the laboratory

Gain knowledge about basics of advanced form elements, understanding of working with child windowses. Also she will try to understand Working With Keyboard.

2 Laboratory Work Requirements

- **Basic Level (grade 5 - 6) you should be able to:**
 - a) Create a Windows application what will display a dialog box on some event (ex. on clicking some button)
 - b) Add a system menu to your application with at least 3 items (add actions to that items)
 - c) Hook keyboard input. Add 2 custom events for 2 different keyboard combinations (ex. change window background on ctrl+space)
- **Normal Level (grade 7 - 8) you should be able to:**
 - a) Realize the tasks from *Basic Level*.
 - b) Add a scroll bar that will change any visible parameter of any other element (color of a text) OR other 2 scroll bars that will manage main window size or position
- **Advanced Level (grade 9 - 10) you should be able to:**
 - a) Realize the tasks from *Normal Level*.
 - b) Customize your application by adding an icon and using different cursor in application
 - c) Add a listbox and attach some events when any element is accessed (clicked)

3 Laboratory work implementation

3.1 Tasks and Points

We haven't got tasks with points

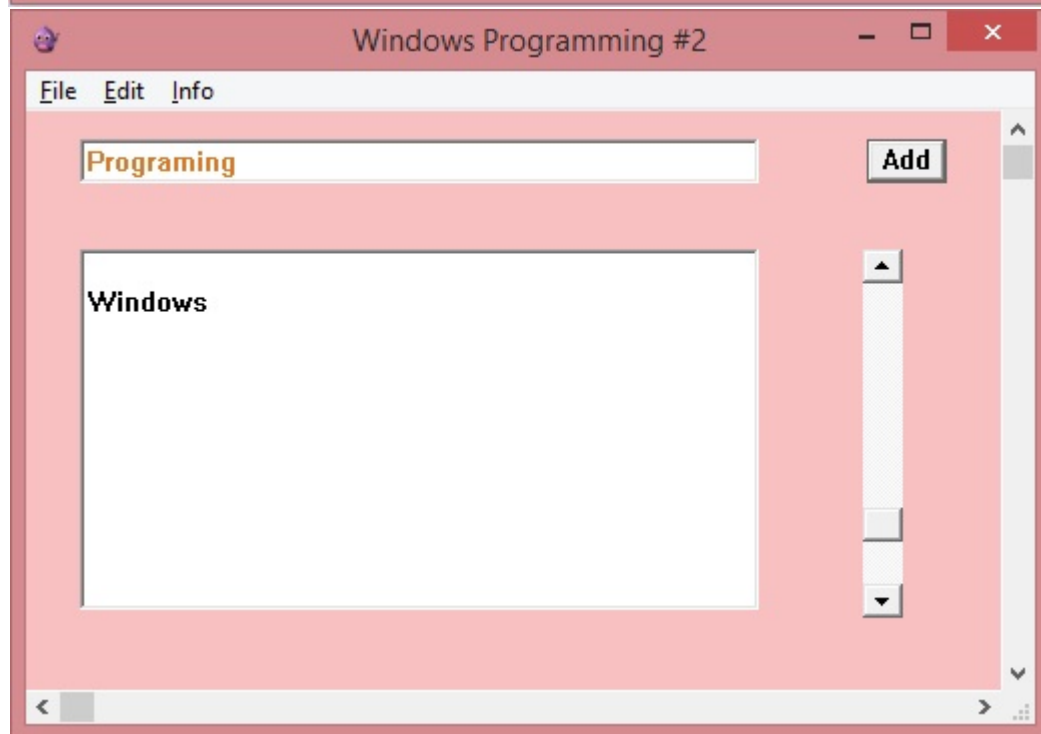

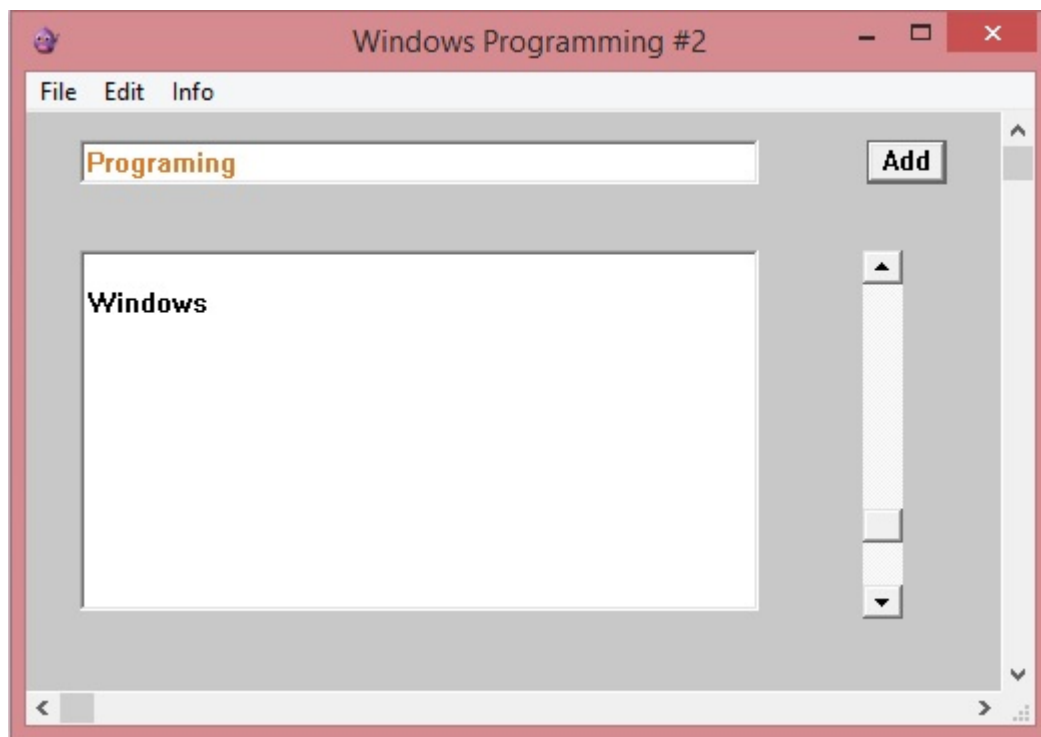

3.2 Laboratory work analysis

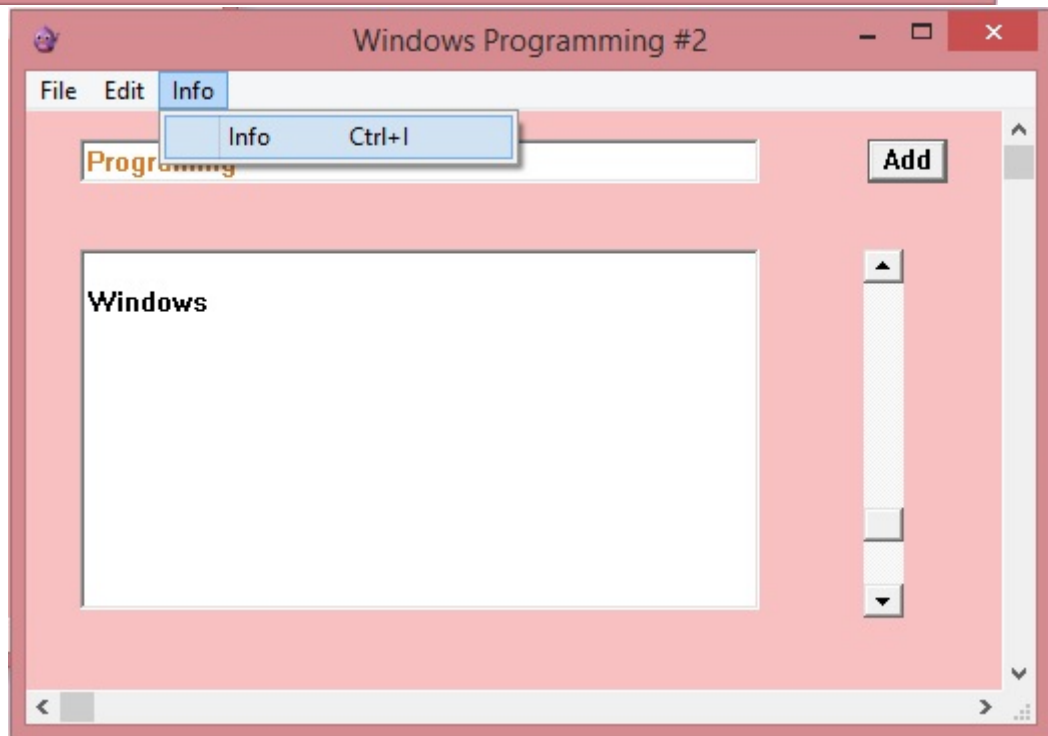

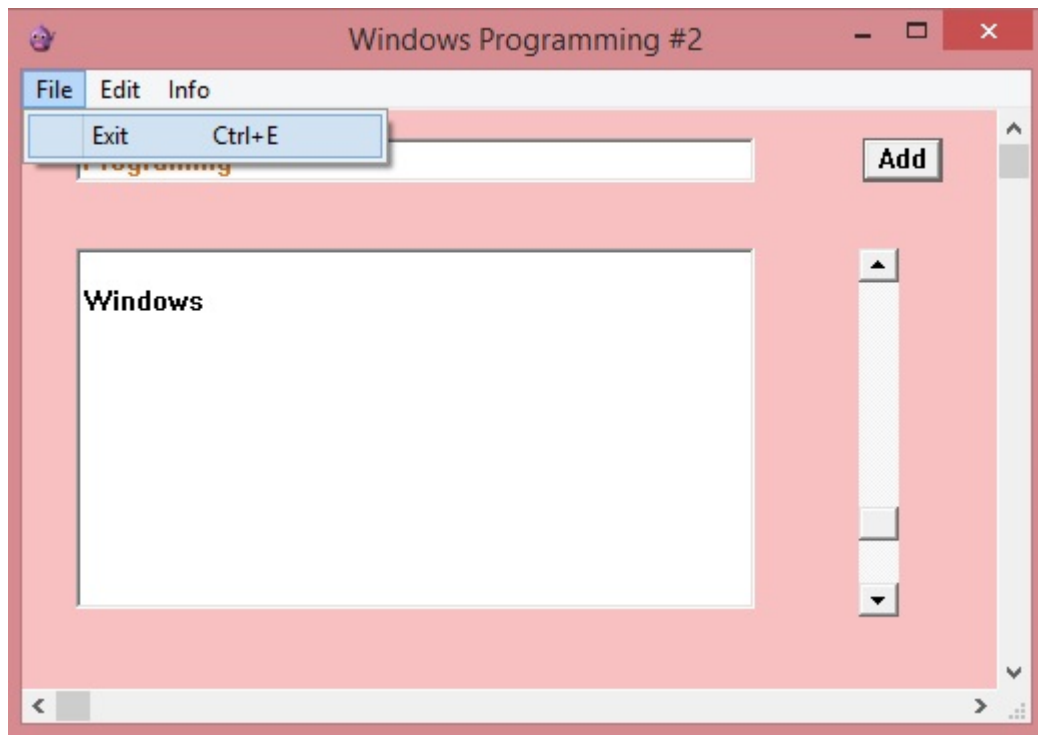

<https://github.com/TUM-FAF/FAF-141-Cotovici-Sanda/tree/master/PW>

I had explained all the features that I had been added to my window in README.md.

3.3 Prove your work with screens

Conclusions

In this laboratory work I have learned a lot of new things: creating a dialog box, working with resource files, adding icons and new cursor, creating scroll bars with another purpose then original one, using hotkeys from keyboard for some actions. I had worked a lot and I think that wasn't enough, the next time will be better.

I wasn't worked step by step, like is written in tasks. In the beggining I choose to add another scroll and icon. So I have created file resource.rc, in which I have declared `IDI_ICON ICON DISCARDABLE "icon.ico"` . This icon is a small bird, downloaded from internet. For cursor I declared `ID_CURSOR CURSOR DISCARDABLE "Button.cur"`. Then in .rc file I created a dialog box, it pops up when I click on Info(from Menu) or on pressing hotkeys Ctrl+I. Also in MENU besides of item Info, there are items File-¿ Exit(exits from program, or you can press Ctrl+E) and Edit-¿ Change Background color. Also I have created a scroll bar which changes text's color. The last task was to add a listbox. My listbox receives elements from a editable box and from Add button. Element could be double-clicked, and apears window with the element's name. Or you can press right click and is displayed a Warning that you can delete element.

So, in this laboratory I have learned a lot about working with mouse, with keyboard, some child window controls, like scroll bars and listbox. A great deal was adding an icon, was so great! Also I was amazed about adding of another cursor. At the beginning I want to put a hand like a cursor, but was hard to find type .cur, so I choose to put an beautiful arrow. Working with scroll bar also was interesting, there are some parameters which you should use and seems that is not so hard. But I felt some pain with creation and fit in the window. The biggest problems I found in creating scroll bar and adding a listbox, but these troubles helped in understanding of processes.
